

U.S. Bank Fleet is pleased to announce five new U.S. Bank Fleet Commander™ *Online* enhancements that strengthen system security, track unauthorized fleet card use and improve the overall ease of using Fleet Commander™ *Online*. The new features will be available to you on **June 17, 2012**.

1. Real Time Gallon and Product Type Activity Report

This real time activity report now includes gallon and product fields to help Fleet Managers analyze and identify exceptions in the number of anticipated gallons or the type of fuel purchased for a vehicle. As a reminder, an immediate gallon and product alert notification via email or text message is already available when you set up a purchase alert. The real time activity report can be found under the transaction reports menu.

2. Limit Report View to Hide Driver IDs

This added security feature limits the ability of users to see driver IDs. If users have report-only access to view a card report, driver's IDs will not be displayed.

3. Limit Report View to Hide Vehicle IDs

Similar to the driver's ID feature, users with report access only will not see vehicle IDs when viewing a card report.

4. Fleet Commander™ *Online* Now Supports Microsoft® Internet Explorer 8.0, 7.0 or 6.0

Even if you already have the required browser, we strongly recommend adding 128-bit encryption to have a secure form of encryption.

5. Message Center Select All Feature

The new select all message feature can save you time when reviewing and deleting Fleet Commander™ *Online* messages. You can select a specific message you want to delete or check all messages to delete messages.
